Here is a little more info on our Organic and Natural Options...

Supper Solved is excited to announce organic and natural options to our customers. We have been hard at work with our suppliers and have pricing info to share with you.

Firstly, we have decided on how much of our meals would rely on organic or natural ingredients. All pork, poultry and beef products will certainly be offered as natural or organic options. Seafood will be offered as wild caught and/or sustainable or better if available. For the rest of the ingredients, we've decided to follow a list commonly known as the "dirty dozen". The dirty dozen is a list of twelve commonly used produce ingredients that if possible, should be consumed as organic items. Here is a link about the dirty dozen.

<http://www.ewg.org/foodnews/summary>

The definitions for organic and natural items are as follows;

Organic: Meat products have been fed with organic feed. They are locally grown and antibiotic free as well as hormone free.

Natural: Meat products are also locally grown, antibiotic and hormone free but their feed isn't organic.

SupperSolved will begin offering one day of organic sessions and one day natural sessions each month as well as to go and delivery options around those dates. If demand increases, we will add more monthly sessions.

As always, we love to hear feedback and we look forward to serving you.

- The SupperSolved team
